## Drinking Water Improvement Program (DWIP)

*Because everyone should  
have clean drinking water*

## What We Do

The YRITWC Drinking Water Improvement Program identifies and assess potential threats to human health from unsafe drinking water while providing education and training on best management practices for self-haul and uncertified drinking water.

## Healthy Communities through education

The trainings will provide general water health and safety information while addressing specific issues that areas are experiencing with realistic solutions to implement at the local level.

**Plus, much more!** Please contact us for further training information.

---

*Thank you to our funder: USDA Rural Development for making all of this possible!*

---

*Community engagement is YRITWC's top priority*

*Our coordinator doing a community site assessment*

## Community Visits

While conducting community site visits, we collaborate with community members to identify and assess alternative drinking water sites where data could be collected. Once data is collected, we can determine whether the community would like to utilize the data to develop an emergency water supply plan in an event when the main source of drinking water is unavailable.
